SUMMARY

Head of Product at TruKKer, the Middle East’s largest digital freight network, with 8+ years in product and operations. I lead Product, Design and BI and own product vision, roadmap and delivery across AI automation, fintech, B2C supply platforms and ERP enhancements in EMEA and CIS, reporting to the CEO and CTO. I got this job by shipping, not by presenting.

SELECTED
IMPACT

85% of customer inquiries automated by EVA, in the agentic AI framework I designed at TruKKer.
DSO cut from 145 days to 95 by the FinOps module I delivered at TruKKer.
8,600+ AI-based onboardings of customers, suppliers, drivers and assets at TruKKer.
22% lower blended CAC and 9% higher AOV at Logisty, the B2C moving platform whose 0 to 1 launch I led.
At Yulu, long-term rental went from 5% to 45% of Bangalore business, a model I worked on from concept to implementation.

EXPERIENCE

Head of Product, TruKKer Jan 2025 to present

- Promoted from Senior Product Manager. Own product vision, the AI transformation roadmap, platform architecture and multi-country execution. Lead the Product, Design and BI teams.
- EVA automated 85% of customer inquiries. I designed and implemented the agentic AI framework behind it, across demand capture, supply matching, pricing, onboarding and operations.
 - Fatima improved sourcing efficiency by 30% and operational efficiency by 25%. 28% fewer escalation cases from an AI operations assistant I built. 8,600+ AI-based onboardings.
 - Partner App organic adoption: UAE 40%, KSA 25%, Turkey 30%. Rebuilt the supplier and driver marketplace: procurement, bidding, payments, document automation, multi-currency ledgers.
 - Blended CAC down 22% and AOV up 9% at Logisty, the UAE home and goods moving platform whose 0 to 1 launch I led, with Dubai’s RTA. Dual-sided referrals and brand-coupon partnerships (IKEA, Noon, Jumbo, Justlife and others) cut CAC; value-added services and dynamic line-item pricing enabled upsells across the booking flow.
 - Transformed fintech and payables with regulatory-compliant invoicing (ZATCA in Saudi Arabia, Uyumsoft in Turkey, 1C in Kazakhstan) and milestone-based wallet and bank payouts, eliminating payment leakages.
 - Drove company-wide strategic decisions on profitability optimization, supply-side engagement and Procure Co, an AI-powered procurement platform combining supplier intelligence, historical demand and workflow automation.

Senior Product Manager, TruKKer Jun 2021 to Dec 2024

- Led a multi-regional platform transformation focused on automation and data visibility.
- DSO from 145 days to 95: delivered the FinOps module with real-time financial dashboards.
 - Logistics, ERP and fintech unified in Tech 2.0, which I designed: end-to-end digital workflows for onboarding, inquiry to order, cross-border cash flow, invoicing and collections.
 - Designed and launched multi-modal transport modules: FTL, LTL and freight forwarding.
 - Profitability KPIs and operational analytics embedded across teams for data-first decisions.

Manager, Process Optimization and Transformation, Yulu Bikes Mar 2018 to Jun 2021
Early hire reporting to the founders. Led the launch of Bangalore operations.

- Worked on the long-term rental business from concept to implementation during the Covid lockdowns; its share of Bangalore business grew from 5% to 45%.
- Relocation process automated by 95% with an in-house app and training.
- Oversaw 350+ executives and 12,000+ cycles and e-bikes; set up repair, maintenance and relocation.
- Increased profitability through the CM-60 project, improving contribution margin through operational efficiency; worked with the city and cluster heads on higher revenue per bike.

SELECTED
PUBLIC WORK

Original code on mock data, none of it company code. Each repo runs offline with zero API keys.

inquiry-triage-agent. Escalation recall 1.00 on 26 labeled cases. The first run scored 0.90: an invoice dispute was auto-answered as a status check. A money guardrail fixed it.

prd-copilot. A product review bar encoded as a linter; the sample PRD scores 100/100. The linter measures presence, the reviewer measures truth.

freight-rate-simulator. Every quote is line items a human can argue with. In 500 simulated shipments, expected profit peaks at 1.22x cost and a 33% win rate.

settlement-engine. Money never floats: balances are derived from entries, never stored. 8 invariant tests pass; the 4-currency demo book balances per currency.

discovery-interview-insights. A theme without a quote is an opinion. Evals on 26 labeled utterances: quotable precision 1.00, recall 0.90, F1 0.95, two misses kept on purpose.

carrier-onboarding-checker. Fails closed: a wrong hold costs a day, a wrong approval puts an unlicensed truck on the road. 9 decision invariants under test.

WRITING

Why agents need evals. The eval, not the model, makes an agent safe to ship.

Price the relationship, not the third decimal. On explainable freight pricing.

Money never floats. What a double-entry ledger for carrier payouts teaches.

EDUCATION

Bachelor of Instrumentation and Control Engineering, Haldia Institute of Technology. Jun 2013 to May 2017.

AWARDS

Best Performing Team 2025, TruKKer GLM 2025.
NASSCOM Shri Dewang Mehta IT Award 2016: Certificate of Excellence, Top Ranker.

SKILLS

Product	AI-driven product strategy, product design, GTM strategy, business strategy, PLM management
AI and data	Agentic AI systems, data analysis, API and third-party integrations
Leadership	People management, stakeholder management
Delivery	Agile and Scrum, JIRA, project management, process improvement, as-is analysis
